

INSTALLATION

Install Tailwind CSS with Next.js

Setting up Tailwind CSS in a Next.js project.

Create your project

Start by creating a new Next.js project if you don't have one set up already. The most common approach is to use [Create Next App](#).

Terminal

```
npx create-next-app@latest my-project --typescript --eslint --app  
cd my-project
```

Install Tailwind CSS

Install `@tailwindcss/postcss` and its peer dependencies via npm.

Terminal

```
npm install tailwindcss @tailwindcss/postcss postcss
```

Configure PostCSS Plugins

Create a `postcss.config.mjs` file in the root of your project and add the `@tailwindcss/postcss` plugin to your PostCSS configuration.

postcss.config.mjs

```
const config = {  
  plugins: {
```

Installation > Install Tailwind CSS with Next.js

Import Tailwind CSS

Add an `@import` to `./src/app/globals.css` that imports Tailwind CSS.

globals.css

```
@import "tailwindcss";
```

Start your build process

Run your build process with `npm run dev`.

Terminal

```
npm run dev
```

Start using Tailwind in your project

Start using Tailwind's utility classes to style your content.

page.tsx

```
export default function Home() {  
  return (  
    <h1 className="text-3xl font-bold underline">  
      Hello world!  
    </h1>  
  )  
}
```
